Advanced Authentication for Security Focused Products

Security with Better UX

Passwordless MFA

Reach robust end-to-end security by providing **Passwordless FIDO-certified** multi-factor, phishing-resistant authentication.

Device Agnostic

No need to install apps or remember passwords. Our Passwordless FIDO authentication works natively on all devices- mobile or desktop.

Seamless Step-up

Authenticate, step up and sign any transaction. Our solution enables to your customers to securely authorize and digitally sign sensitive transactions while establishing non-repudiation for all stakeholders.

Out-of-the-box Compliance

Stay on top of Compliance Requirements using multiple authentication options LoginID provides: from the most sophisticated passwordless methods that are explicitly PSD2 compliant and easy-to-comply with GDPR (through elimination of server-side secret sharing) all the way to strong authentication using legacy MFA mechanisms such as SMS, Voice, OTP.

Usability for Developers and Users

Fast Deployment and Integration

Leverage LoginID SDKs to enable seamless MFA authentication as a service. Reduce effort and complexity of testing, staging and launching new MFA that meet the highest standards.

Customizable User Interfaces

No-code customization of brand attributes and UI.

Policy Management

No-Code Policy configuration that adapts your to security needs and risk levels.

Global Scalable Performance

Our modular architecture allows each component to be deployed and then re-deployed independently.

Powering granular scalability that is cost-and time-effective and performant:

- High throughput
- 60ms authentication time
- Low latency (cater for payments and fast transactions)
- Multi-active global deployment
- Multi-tenancy support

About LoginID

LoginID is a San Mateo/Toronto based company focused on bridging the gap around authenticating users and securing their information. This is facilitated through its FIDO2 and UAF certified strong customer authentication coupled with other legacy authentication factors. The team is composed of seasoned executives with decades of experience, across global brands, helping commercialize products around security, cryptography, payments and mobile.
